## 2.5 GHz Low Power Prescaler With Stand-By Mode

The MC12095 is a single modulus prescaler for low power frequency division of a 2.5 GHz high frequency input signal. MOSAIC V™ technology is utilized to achieve low power dissipation of 24 mW at a minimum supply voltage of 2.7 V.

On-chip output termination provides output current to drive a 2.0 pF (typical) high impedance load. If additional drive is required for the prescaler output, an external resistor can be added in parallel from the OUT pin to GND to increase the output power. Care must be taken not to exceed the maximum allowable current through the output.

Divide ratio control input (SW) selects the required divide ratio of ÷2 or ÷4. Stand-By mode is available to reduce current drain to 100 µA typical when the standby pin SB is switched LOW disabling the prescaler.

### Features

- 2.5 GHz Toggle Frequency
- Supply Voltage 2.7 V to 5.5 Vdc
- Low Power 8.7 mA Typical
- Operating Temperature -40 to 85°C
- Divide by 2 or 4 Selected by the SW Pin

### FUNCTIONAL TABLE

SW	Divide Ratio
H	2
L	4

1. SW: H = ( $V_{CC} - 0.4$  V) to  $V_{CC}$ ; L = OPEN
2. SB: H = 2.0 V to  $V_{CC}$ ; L = GND to 0.8 V
