MEDIUM-POWER PNP SILICON TRANSISTOR

. . . designed for general-purpose switching and amplifier applications

- Excellent Safe Operating Area
- DC Current Gain Specified to 4.0 Amperes
- Complement to NPN Type 2N3054A

4 AMPERE
POWER TRANSISTOR
PNP SILICON
55 VOLTS
75 WATTS

FIGURE 2 – SWITCHING TIME EQUIVALENT TEST CIRCUIT

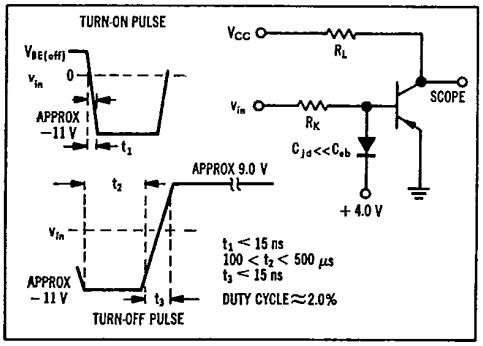

FIGURE 3 – TURN-ON TIME

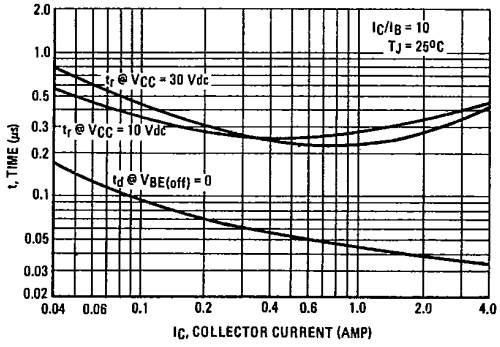

FIGURE 4 – THERMAL RESPONSE

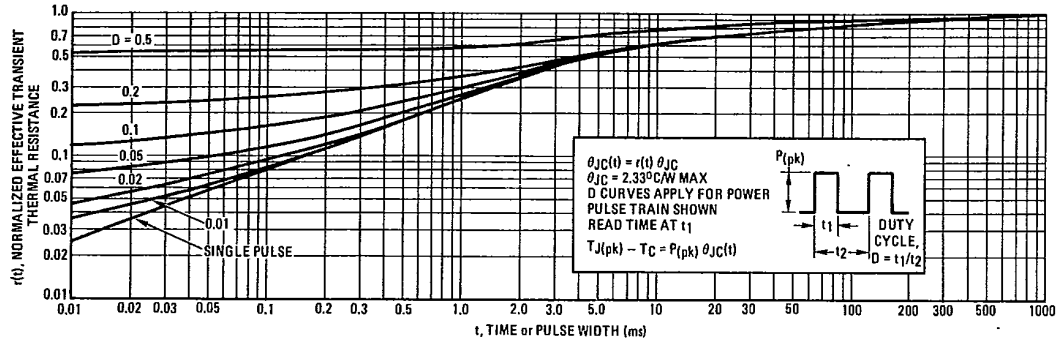

FIGURE 5 – ACTIVE-REGION SAFE OPERATING AREA

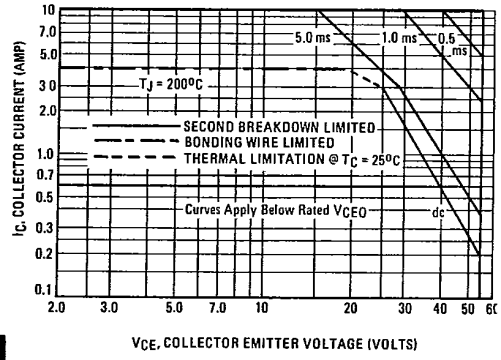

There are two limitations on the power handling ability of a transistor: average junction temperature and second breakdown. Safe operating area curves indicate $I_C - V_{CE}$ limits of the transistor that must be observed for reliable operation; i.e., the transistor must not be subjected to greater dissipation than the curves indicate.

The data of Figure 5 is based on $T_{J(pk)} = 200^oC$; T_C is variable depending on conditions. Second breakdown pulse limits are valid for duty cycles to 10% provided $T_{J(pk)} < 200^oC$. $T_{J(pk)}$ may be calculated from the data in Figure 4. At high case temperatures, thermal limitations will reduce the power that can be handled to values less than the limitations imposed by second breakdown.
